

DIGITAL MASS

# Did you know you could query that?

July 2022

# APIs for asking questions

- This is a developer focused topic
- There are so many! (Hard to keep them straight)
- What is SOAP API... really?
- Authorization, how though? Which do I use?!
- We won't cover them all. We'll list what will and won't be covered
- Hope to share some:
  - “Hidden” features
  - Useful endpoints
  - Spark ideas for new projects of your own that leverage these interfaces

DIGITAL MASS

Who we are

DIGITAL MASS

# We are developers

Here to talk about the variety of Salesforce APIs and how they enable:

- Reporting on the health of your instance:
  - Predicting feature consumption
  - Security
  - Governance
- Extending existing business processes through:
  - Back-end server-to-server integrations
  - Web extensions
  - CLI Plugins
  - More!

DIGITAL MASS

## MJ (a.k.a. Martin Davis)

- From the land of 10,000 lakes
- 13 years as a developer
- Former IoT Applications Engineer
- Evangelist of the belief that Salesforce code can be written and deployed in a standard pipeline
- Rustacean Wannabe & Python has-been
- Making Salesforce a normal part of the IT stack through:
  - Reporting
  - Advanced monitoring
  - DevOps
  - Data Governance
- Hot take - Salesforce is code and should be deployed like code

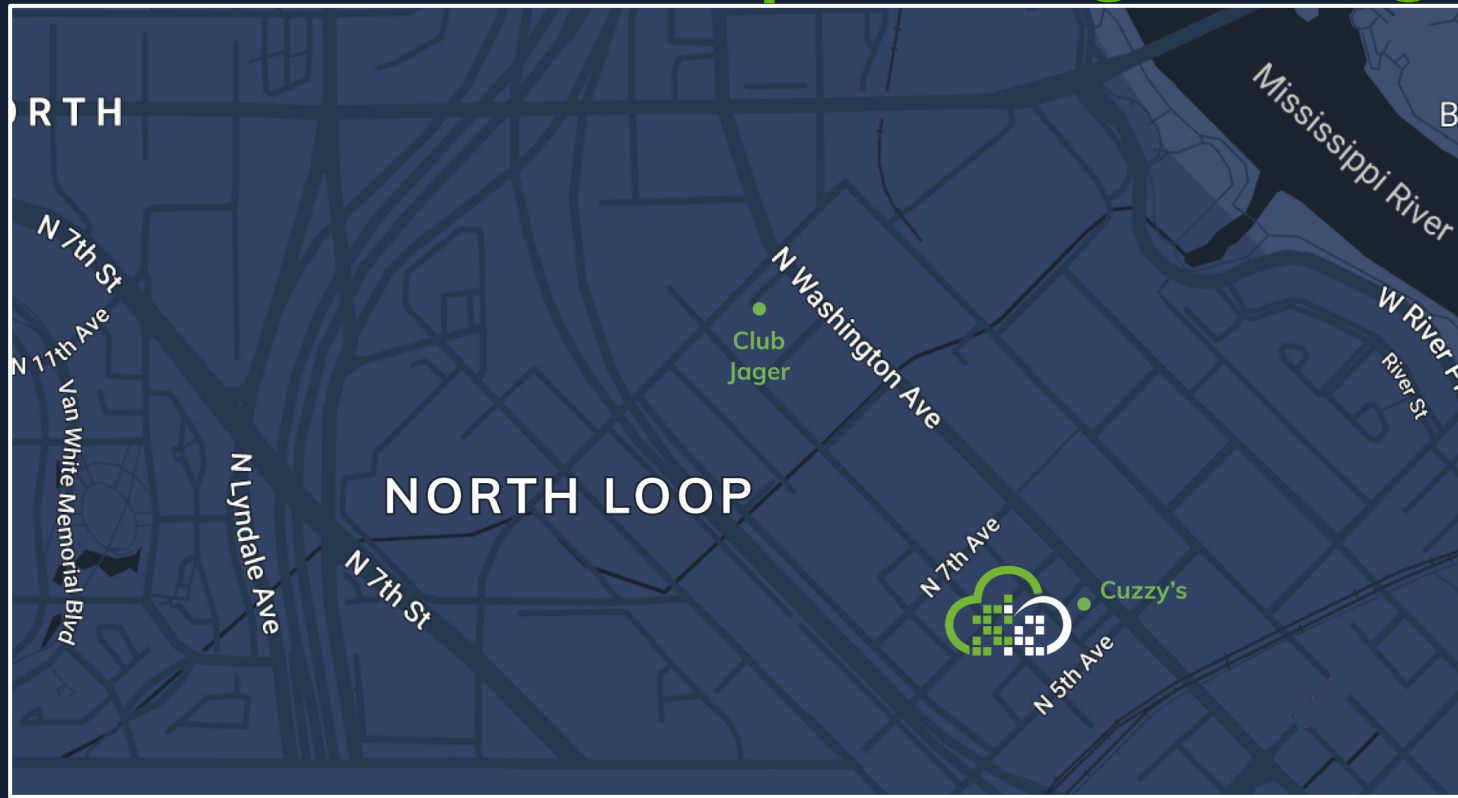

DIGITAL MASS

## Andrew Dawson (a.k.a. AD)

- From the land of 10,000 cornfields (Not NE)
- 12x certified full stack developer with 8 years in the platform
- Focus on formalizing and modernizing dated Salesforce development patterns
  - Basically, this guy just loves Flow Builder...who doesn't? ;)
- Javascript apologist & TypeScript enthusiast
- Won't shut up about Microsoft, like really...
  - Not afraid to roll up his sleeves and write some:
    - PowerShell
    - VBA
    - M & DAX
- Hot take - Salesforce Flow > Power Automate (Flow)

# Located in the North Loop - Maytag building

## Gold Sponsors

DIGITAL MASS

## We're going to cover:

- Lightning Platform SOAP - No Demo
- Standard REST API - Demos
- Einstein Platform Services - Demo
- Lightning Console API - Demo
- Tooling API - Demo

## Maybe next time...

- Marketing Cloud
- MC Einstein Content
- Subscription Management
- Tableau
- Tableau CRM
- Tableau CRM SAQL
- CPQ API
- Heroku Platform
- Einstein Bot
- Metadata API
- Bulk API 2.0
- Metadata Component Dependency API
- Connect API
- Streaming API
- Salesforce UI API
- B2B Commerce API
- B2B Commerce PWA Kit and Managed Runtime
- Salesforce CDP
- Customer 360 Data Manager
- Pardot
- Quip Live Apps
- Quip Automation

# Safe Harbor

"Safe harbor" statement under the Private Securities Litigation Reform Act of 1995: This presentation contains forward-looking statements about our financial results, which may include expected GAAP and non-GAAP financial and other operating and non-operating results, including revenue, net income, diluted earnings per share, operating cash flow growth, operating margin improvement, unearned revenue (previously referred to as deferred revenue) growth, expected revenue growth, expected tax rates, stock-based compensation expenses, amortization of purchased intangibles, and shares outstanding. The achievement or success of the matters covered by such forward-looking statements involves risks, uncertainties and assumptions. If any such risks or uncertainties materialize or if any of the assumptions prove incorrect, the company's results could differ materially from the results expressed or implied by the forward-looking statements we make.

The risks and uncertainties referred to above include -- but are not limited to -- risks associated with the effect of general economic and market conditions; the impact of foreign currency exchange rate and interest rate fluctuations on our results; our business strategy and our plan to build our business, including our strategy to be the leading provider of enterprise cloud computing applications and platforms; the pace of change and innovation in enterprise cloud computing services; the competitive nature of the market in which we participate; our international expansion strategy; our service performance and security, including the resources and costs required to prevent, detect and remediate potential security breaches; the expenses associated with new data centers and third-party infrastructure providers; additional data center capacity; real estate and office facilities space; our operating results and cash flows; new services and product features; our strategy of acquiring or making investments in complementary businesses, joint ventures, services, technologies and intellectual property rights; the performance and fair value of our investments in complementary businesses through our strategic investment portfolio; our ability to realize the benefits from strategic partnerships and investments; our ability to successfully integrate acquired businesses and technologies, including the operations of MuleSoft, Inc.; our ability to continue to grow and maintain unearned revenue and remaining performance obligation; our ability to protect our intellectual property rights; our ability to develop our brands; our reliance on third-party hardware, software and platform providers; our dependency on the development and maintenance of the infrastructure of the Internet; the effect of evolving domestic and foreign government regulations, including those related to the provision of services on the Internet, those related to accessing the Internet, and those addressing data privacy and import and export controls; the valuation of our deferred tax assets; the potential availability of additional tax assets in the future; the impact of new accounting pronouncements and tax laws, including the U.S. Tax Cuts and Jobs Act, and interpretations thereof; uncertainties affecting our ability to estimate our non-GAAP tax rate; the impact of future gains or losses from our strategic investment portfolio; the impact of expensing stock options and other equity awards; the sufficiency of our capital resources; factors related to our outstanding debt, revolving credit facility, term loans and loan associated with 50 Fremont; compliance with our debt covenants and capital lease obligations; current and potential litigation involving us; and the impact of climate change.

Further information on these and other factors that could affect the company's financial results is included in the reports on Forms 10-K, 10-Q and 8-K and in other filings we make with the Securities and Exchange Commission from time to time. These documents are available on the SEC Filings section of the Investor Information section of the company's website at [www.salesforce.com/investor](http://www.salesforce.com/investor).

Salesforce.com, inc. assumes no obligation and does not intend to update these forward-looking statements, except as required by law.

DIGITAL MASS

Just kidding...

## Let's address the authentication elephant

Authenticating with Salesforce is not as easy as Basic Authentication using an API token in a header.

Salesforce almost always expects authorization to be attached to a User.

It is a common practice to consume a user seat to create a service account. Looking into your own org, if your current application is using a teammate's credentials in an OAuth grant, we strongly recommend changing this.

Here are some healthy reasons to make this change:

- Revocation
- Increasing the bus factor
- Abstraction
- Discrete profiles and permission sets to attach to the service scope
- Debugging, "Why were all these records modified by Hank? Isn't he the admin?"

DIGITAL MASS

# All of these buzzwords... where to start?

Auth flows, JWT, grants, session ids, tokens, connected apps, scopes, client ids/secrets, and certificates :')

WHAT?!?! - The above is a lot, we know - deep breaths...

Some useful resources for generating a token/session Id:

- [SFDX CLI](#) - Authorize an org to retrieve this token
- [Workbench](#) - Log in and interact with several of these APIs
- [Postman](#) - read more about the collection on [Github](#)
- [SOAP UI](#) - there's a great [module](#) on Trailhead covering this
- From within Salesforce - that's right! Your session Id doubles as a token with most Salesforce APIs

DIGITAL MASS

# Let's talk APIs

DIGITAL MASS

# A Note on the SOAP API

- The SOAP API is:
  - The granddaddy of Salesforce APIs - it's old, it's stubborn... it's xml-based
  - Far and away the most *robust* suite of services to interface with
  - Its own protocol, meaning authentication, and the techniques to ask it questions relative to the REST APIs covered below, are entirely different
- The SOAP API is *not*:
  - Going anywhere - Salesforce is an API-first shop, and most functionality is exposed here before anywhere else
  - Necessary for *most* types of interaction with the platform
- When should I consider using it?
  - SOAP is an appropriate solution for:
    - Enterprise integrations with *multiple* disparate functional requirements, or complex requirements not provisioned through standard REST APIs
    - Tenured development teams with prior SOAP experience
    - Organizations with an established practice of working with WSDLs, and which understand the contract that document represents

DIGITAL MASS

# REST API

- **What is it?** A robust collection of common utilities we may want to know more about, or interact with, made available through the more developer-friendly REST interface
- **You might not know...**
  - Not OpenAPI compliant - it can't be imported as an external service. Salesforce is taking steps towards making this possible
  - NOT at feature parity with the SOAP API and vice versa
    - Common misconception
    - Many of the same interactions are possible with either; however, beyond the tech differences underpinning each architecture, the approach to asking each to perform a particular action is different. E.G. Executing Apex

DIGITAL MASS

# REST API - In Use

- Enables better org management through:
  - [Checking org limits through sfdx cli](#) - (demo)
  - [Inspect org limits with your own program](#) - (demo)
- Example endpoints:
  - [Execute custom/standard invocable actions](#) - (demo)
  - [Query setup objects](#) - (demo)
  - [Submit multiple simultaneous requests with composite graphs](#) - (demo)

DIGITAL MASS

# Einstein Platform Services - NodeJS

- **What is it?** Comprised of two distinct services:
  - Language - natural language processing - Identify:
    - Intent
    - Sentiment
    - Named Entities (Beta)
  - Vision - image classification and OCR
  - BYOD (Bring Your Own Data for Most Endpoints and Services)
- **You might not know...**
  - Free usage of up to 2k requests/mo - read more about rate limits [here](#)
  - Adheres to Open API spec - endpoints can be registered as external services
  - Requires JWT to authorize - Apex now supports [JWS](#) & [JWT](#)
- **Example endpoints:**
  - [Scan a business card](#) - Vision (demo)
  - [Detect sentiment](#) - Language
  - [Classify an Image](#) - Vision

DIGITAL MASS

# Lightning Console API - Salesforce

- **What is it?** Five APIs for interacting with the following elements in console apps:
  - **Navigation Item** - Describe the navigation options in the current app
  - **Workspace** - Interface with the tabs and subtabs in the current app
  - **Utility Bar** - Take the utility bar to another level with async/passive processing
  - **Conversation Toolkit** - Extend an agent's chat experience in service cloud
  - **Omni Toolkit** - Extend omni-channel and more with service requests
- **You might not know...**
  - These APIs are not exposed as URIs - they cannot be interfaced with outside of Salesforce. Interact by bubbling events up through the DOM to a listener
  - Aura is the only supported mechanism to ask these services questions without a custom-built solution for generating custom events in vanilla JS

DIGITAL MASS

# Lightning Console API - In Use

- Empowers better org management through:
  - Passively logging user activity as they navigate the app
  - Components running in the utility bar are the closest thing to ubiquitous, non-interactive processing on the platform
  - Monitor and report on agent chat logs with your customers
- Example endpoints:
  - [Get/Set Navigation Items](#) - (demo)
  - [Get Utility Context/Open Utility Bar](#) - (demo)
  - [Open a console tab](#)
  - [Send an instant message to a customer](#)
  - [Log in to Omni-Channel with a specified status](#)

# Let's download some logs

```
#!/bin/bash
if [ -d "$HOME/temp/log" ]
then
    cd $HOME/temp/
else
    echo "Directory $HOME/temp/log does not exist, creating it..." && mkdir $HOME/temp && mkdir $HOME/temp/log && cd $HOME/temp/
fi

echo -n "How many Logs do you want to retrieve? "
read NUMBEROFLOGS

echo -n "Which sfdx cli org alias are you going to use? "
read ORGALIAS

for logId in $(sfdx force:data:soql:query -q "select id from apexlog LIMIT $NUMBEROFLOGS" -u $ORGALIAS | tail -n +3); do
    idLength=`expr length "$logId"`
    if [ $idLength -gt 17 ];
    then
        echo "writing log/$logId.debug"
        sfdx force:apex:log:get --logid $logId -u $ORGALIAS > log/$logId.debug
    fi
done
```

## Some interesting objects you can query from SOQL directly

- ActiveFeatureLicenseMetric
- ActivePermSetLicenseMetric
- ActiveProfileMetric
- ActivityUsrConnectionStatus
- ApexClass - First 1 million characters - Run against PMD ruleset? Other SCA?
- ApexLog
- ApexTrigger
- AuraDefinition
- CronTrigger - an individual schedule job run
- Dashboard - USING SCOPE ALLPRIVATE - see other user's privately-held dashboards
- DashboardComponent - find which users have components referencing a particular report
- DuplicateRecordSet, DuplicateRecordItem
- FieldPermissions
- FieldSecurityClassification
- FlowTestTestResult
- FlowVersionView
- Folder
- Group, GroupMember
- LightningToggleMetrics/LightningUsageByBrowserMetrics
- LoginGeo, LoginHistory, LoginIP
- ObjectPermissions
- ...OwnerSharingRule - requires support ticket request. Enables logging of sharing rule metadata!
- OpportunityStage
- PermissionSet, PermissionSetAssignment, PermissionSetGroup, PermissionSetGroupComponent, Profile
- RelatedListDefinition, RelatedListColumnDefinition
- Report - USING SCOPE ALLPRIVATE
- SetupEntityAccess
- StaticResource
- UserPermissionAccess
- UserRecordAccess

Check out the object reference [here](#) to learn more about these and other objects!

## Wrapping up

- There is a huge surface area of APIs in Salesforce that have high degrees of utility
- Authentication isn't as hard as it looks when getting started. The hardest choice that you have is choosing the right grant to use
- The front-end API is deeper than Lightning and Aura documentation
- Logs are just objects, you can make use of them
- These APIs and the services you create around them are your power tools for heavy lifting inside and outside of Salesforce
  - Governance
  - Reporting
  - Automation
  - Compliance

Want to talk more APIs? Come visit us at our booth!
